### Adding New Tax-Payers.

There is only a slender margin in the most hopeful way in the matter of "unloading" land which was taken over years ago for non-payment of taxes. Daily sales are being recorded of considerable amounts, at prices which are presumably sufficient to meet the arrears charged up against the property. The real gain is not so much getting these arrears, as in getting the land again into private possession and available for future taxation. In doing that the one hope of making possible a substantial reduction in the tax rate. If the land is sold, and the taxes will be quite a number of new pockets in line for next year's levy.

### The Poultry Show.

One does not have to be a "bird fancier" to sit up and take notice that the annual poultry show opens the last day of January. A normal liking for eggs, and a glance at the market prices, are all that is necessary to induce a healthy interest in any event which seeks to encourage or forecast a more profitable production in future years. A country where coarse grains are grown in such abundance as in Alberta ought to be to a country where eggs would be within the reach of the average purse at all times of the year. The fact is that they are not within its reach in Alberta this winter, and have not been for many winters past. That alone is enough to focus public attention on the poultry show. There is plenty of room for the Alberta hen to multiply and speed up on production without demoralizing the trade.

### Albertans Should Get Preference.

Alberta mining engineers have registered a protest against the rumored intention to import an engineer from the United States to take the office of chief inspector of mines for the province. If such is the purpose of the Government, the objection is well taken and will be supported by public opinion. Preference is appointments such as that should be given to Albertans, and to bring in an outsider would be a reflection upon the standing of the engineers in this province. It would be a reflection also on the regulations under which members of that profession get their training, and on the qualifications demanded for practice of the profession. If, however, it is the aim of the Government to bring in the best of all the scores of engineers in the province, there is none fitter to fill the post with credit, than one who must be something wrong with our universities and also with the regulations under which the graduates of these colleges are admitted to professional standing here. Incidentally, the universities are in deadly competition with Alberta for the coal markets in Ontario and Manitoba. U. S. operators have already adopted some peculiar methods in order to keep the Alberta coal out of those markets. On that account it would be as well to look some where else for an official having any sort of jurisdiction over Alberta mines if it were necessary to import one—which is not the case.

### The Penalty of Disorder.

The theatre disaster in Montreal will no doubt be the subject of investigation which will in due course determine the exact cause and assign responsibility. Meanwhile it is quite probable that public and official attention will be turned to the arrangements which are provided for theatres and other places where a large audience to disperse quickly and safely when a fire scare occurs. If the building regulations have been relaxed or bylaws not enforced, there will be a sudden tightening up of the restrictions. There should be a corresponding quickening of interest in the same subject in every other town and city in Canada. And a new sense of the importance of fire drills in the public schools, where by the children are taught how to get out of a building in the shortest space of time without disorder or accident. The tragedy is surely terrible enough to arouse the nation to the danger that overlooks every large gathering of people, and to the penalty that may have to be paid if any safeguards are neglected. But if the news reports are to be trusted, this particular horror did not occur because there were not enough exits, nor because they were not suitably located or the stairways not properly built; nor even because a panic seized the audience. According to these accounts, the people on the main floor got out without injury, or notable excitement, and the children from the balconies were filing down the stairways with every precaution that nobody would be killed or seriously hurt when in a twinkling the thing "just happened." Some children on a step only five feet from the ground stumbled and fell. The pressure here did not kill any one, and nearly four score little lives were crushed out, despite the fact that men and onlookers could do to disentangle the struggling mass.

Apparently all that was needed to complete the evacuation without mishap was that a few cool-headed and strong-armed adults should have been distributed among the little folks on the stairs and at the top, to check the stampede and hold them when the blockades occurred at the bottom steps. If there were grown-ups in the descending throng, they were evidently too few in number, or were not physically capable of meeting an emergency. The moral is one that should fix itself in the minds of men and women everywhere, some of whom may seem to be called upon to face similar conditions. Order, direction, control to have been all the situation required.

## Looking Forward

By EDGAR A. GUEST

In the days that were, I said  
"Joy is waiting just ahead."  
Simpler, I feel, than  
When I've joined the ranks of men."  
Always calling seemed to be  
Some new happiness for me.  
And when, courting her, I said:  
"Glad I'll be when we are wed."  
Joy was found and journeyed on.  
Dreams have come and dreams have gone.  
Every day has held in view  
Something to look forward to.  
Still we dream and still we see  
Happiness that is to be.  
And when, in haste and fear,  
Joy will turn to down the years.  
"Lately sad, and lately new,  
There is much we long to do.  
Much we're trying we shall see  
In the days which are to be."

## Health and Diet Advice

By DR. FRANK MCCOY

Diet Specialist and Author of "The Road Way to Health."

Questions on Health and Diet answered by Dr. McCoy, when addressed in care of The Edmonton Bulletin.

### STARVING FOR LIFE

Every tissue of the body contains organic calcium, which is also known by the name of lime. The hard tissues such as the bones and the firm tendons and ligaments contain the largest proportion of this valuable element, but no cell of any other part of the body can live for very long without calcium in its mineral composition.

The blood is predominantly alkaline and death ensues as soon as this alkaline balance is lost and the blood becomes overcharged with acids. Judging health as 100 per cent, if the blood contains only one half as much alkaline as it should, the health of that individual is deprived of alkaline bases is certainly not over 50 per cent of the normal. Calcium standards as the greatest source of this blood supply of alkaline salts. Efforts are being made by chemists to develop some method of supplying this lime to the tissues through artificial means, but their efforts have so far completely failed and we are forced to fall back upon the natural source so obvious at all times. This natural supply can come only from the use of food which is rich in calcium and which has not been de-mineralized by long storage, preparation and changing to the modern life.

Whole grains include calcium in abundance in their chemical composition, but the element as well as many others are completely lost in the refining process used by the white flour makers. The valuable white flour makes are taken out in the first few minutes and the entire surplus "pure" starch is sold by millers who advertise their flour as being white and pure than others.

Cow feed the whole grain to remain in health and give life to their calves. If fed on white flour they become ill and die within a few weeks. This is because of starvation for the necessary organic minerals of the whole grain. If the cows are only fed on white flour, their calves will be born dead or only live a few hours. When the calves are born, the milk is sold by millers who advertise their milk as being pure and rich in calcium. The calves starve for life and die within a few days.

People who use an excess of de-fatted foods will always complain of "run down." If it is only long enough about by the use of unsaturated foods which "run up" their calcium value in the cells.

Calcium stored in the cells cannot be used properly as this element is indispensable in making the digestive system work. The chemistry of digestion and assimilation is lost.

If you have enough calcium in your blood, the blood will naturally maintain the blood in its normal state. The blood is the "blood" of being calcium.

The use of over-refined foods and the use of de-fatted foods will always lead to the loss of calcium in the cells.
